## NURSING STRATEGIC LEADERSHIP AND BUSINESS

Knowledge acquisition is a complex process that calls for effective planning and goal setting. In so doing, every scholar has to endeavor to remain relevant in achieving the set objectives. In this regard, an individual needs an exquisite strategy in developing skills, an affirmative attitude, and knowledge to achieve the desired goals outlined in the program. About the excellent approach in creating the right path to achieving the set goals, my study revolves around the influential traditions of developing the right attitude, skills, and knowledge, citing the following cases:

### **1. Development of needed advanced competencies for increasingly complex practice, faculty, and leadership roles**

To develop advanced competencies for increasingly complex practices, faculty, and leadership roles, I have developed a Knowledge, skills, and attitude by a complex integration of knowledge and skills through professional judgments and critical analyses (Fukada, 2018). As a professional, I have endeavored to understand the three nursing competence elements to remain relevant to the goal. The behaviorism, holism, and character trait aspect of competence have remained a core in my nursing practices, to perform my duties exemplary. The three-element of nursing has remained my guiding principle in understanding people and their situation. I have also been seeking collaboration with colleagues in providing the best outcomes in the nursing profession (Fukada, 2018). The integration of the three aspects of competence has aided me in acting at the patients' best interests through professionalism practice by with standard nursing code of conduct and advancing competently.

### **2. Enhanced knowledge to improve nursing practice and patient outcomes**

**Regarding the knowledge enhancement, I have conducted extensive research and training programs to develop pertinent acquaintance of skill and affirmative attitude in the execution of nursing practices about the above heading. Like any specific industry, the healthcare industry has been undergoing dynamism in contemporary civilization (Pahitak, 2016). By engage in research, I have endeavored for Evidence-Based Practices (EBP), which offers a positive impact on the patients' outcomes through the EBP guarantees the nurses' practices based on transparent information.**

**Moreover, conducting research has helped me build confidence in myself due to patients' trust that to research and training (Pahitak, 2016). The preliminary investigations have also brought the idea of a strong positive correlation between exercise and extensive study and proper care provision. In conducting research, I have significantly led to high advanced nursing practices through inquiry of dynamism that the changing environment presents (Pahitak, 2016). It is worth noting that the world has been undergoing strange pathogens invasion of new infectious strains, which without extensive on their handling, could be so devastating to the entire globe that could present trying situations.**

**3. Enhanced leadership skills to strengthen practice and health care delivery**

**Leadership in healthcare is not an event of a single day but a process that incorporates various elementary skills for the organization's success (Swan et al., 2020). To develop knowledge, skills, and attitude towards achieving excellent leadership, I have developed full partnership relationships with other colleagues across all healthcare settings to sharpen my leadership skills and redesign the health provision. Health care is like any community that one produces with expectations of best outcomes. Engaging in full relationship with other practitioners across the health divide has propelled the realization of improved and transformed nursing division through excellent service provision with enhanced leadership skills (Swan et al., 2020). The exclusive partnership has not only impacted my leadership skills, but it has resulted in spills over effect into suitable policy formulation, which presents a positive impetus on health care delivery.**

**Furthermore, engaging all the colleagues in consultative leadership has helped me learn how to seek amicable solutions within the healthcare organization (Swan et al., 2020). Exchanging ideas across the professional divide on how to provide the best solution to emergent issues in health entities has helped me groom my proficiency as I fail to meet the course objectives (Swan et al., 2020). In so doing, the excellent partnership has helped to note**

**any decision in a more timely way to initiate timely adjustment if need be, and thus promoting best practices and advanced health provision.**

**4. Employ effective communication and collaborative skills in the development and implementation of practice models, peer review, practice guidelines, health policy, standards of care, and/or other voluntary products**

**Regarding effective communication with collaborative skills, I have sought various ways to break communication barriers in this industry, which has been the main setback. I have developed good cooperation and teamwork to eliminate potential sources of hindrance in communication (Suzinski et al., 2019). The studies advanced previously notes that significant deaths have occurred in the recent past due to errors associated with a lack of proper communication channels (Suzinski et al., 2019). I have called for common communication channels with no prejudice and inhibitions in the quest to develop collaborative skills and implement best practices in nursing.**

**It is worth noting that the US comprises diverse cultural affiliations, such as the Appalachians and cross-culture areas. Due to cultural misreading, their ways of communication are quite different from the rest of the population (Suzinski et al., 2019). The designing of**

**traditional communication media in the form of emails and printed media offer uniform information to all practitioners and enhance spirited teamwork toward an analogous goal in implementing peer review models, standard care to patients, and other voluntary products (Guzinski et al., 2015). In general, effective communication channels minimize resistance associated with verbal communication and foster support among the staff to enhance peer performance related to communication business.**

### **5. Lead Interprofessional teams in the analysis of complex practice and organizational issues**

**Nursing is a complicated discipline that cannot stand on its own. Inter-professional collaboration is essential in an analysis of problematic practices and issues in the organization (Guzinski et al., 2015). In this regard, I have developed vast knowledge and skills, and the right attitude in my professional life, venturing into inter-professional learning on improving the inter-professional models in healthcare practices (Guzinski et al., 2015). By engaging in the inter-professional collaboration, I have vowed to strengthen the industry through collaborative measures resulting from proper education with continual modifications of the healthcare sector.**

**In line with the Association of American Nurses School, my venture into inter-professional collaboration shall enhance a strong workforce with an excellent nursing perspective (Suzinski et al., 2019). The strategic council of the right-minded seems greater heights in the level of expertise in challenging analysis practices and ability to any issues in the organization. The collective skills offer the best alternative in solving challenges that may arise (Suzinski et al., 2019). It is imperative to note that inter-professional unity is a sure guarantee for achieving growth and solving complex problems in the healthcare sector.**

### **Conclusion**

**In my quest to achieve the course goals, I have been able to brainstorm different ideas in which the healthcare sector can be improved technically and businesswise through the provision of best practices. The views include developing proficiency in healthcare, creating healthy leadership skills that offer best practices to the healthcare industry. Experience guarantees quality service provision while the excellent leadership drives the sector to greater heights. Besides, my presentation appreciates the essentiality of extensive research in the healthcare industry. The analyses offer the medical practitioners vast knowledge on the emerging pathogens for in effect management. Moreover, my study found it worth to note the importance of creating**

**and interdisciplinary collaboration in achieving the system goal. The collaborative measures have also ensured that all the healthcare center works in unison towards the successful end.**
